

Scoop PageTrack

Scoop PageTrack gives you a total overview of your editorial product. Live thumbnails, previews and page status indicators give you up-to-the-minute information on each editorial page during the pagination process. So relax, lean back and browse. PageTrack is in full control.

Views

PageTrack allows newsroom, production, and management staff to view editorial pages of a publication in progress. Users are presented with a thumbnail preview of each editorial page. With just a click of the mouse, you can view a full page preview, a JPEG image or an optional full size PDF. Editorial articles can also be viewed directly in PageTrack from the editorial page.

Information

PageTrack provides detailed information about each editorial page, including articles, pictures, ads and page properties. As page designers work on the editorial pages, information is dynamically updated to the web browser.

With the appropriate module, PageTrack can receive information back from your imagesetters, confirming that editorial pages printed properly.

Status

Knowing the status of each editorial page is crucial to editors, production and the printing facility. With PageTrack, statuses can be customized to match your pagination process. While page designers are working, they can quickly change the status of a page, so viewers can instantly see the latest information.

Interface

From the main PageTrack interface page, users select the product page. Page designers can launch a page with QuarkXPress® or Adobe InDesign® for pagination.

Flexibility

Scoop PageTrack works in conjunction with the Scoop editorial system. PageTrack can also be implemented with any editorial system that uses QuarkXPress® or Adobe InDesign® for pagination.

Scoop is the ultimate Software for Your editorial workflow.
