

# SpiceRAQ™

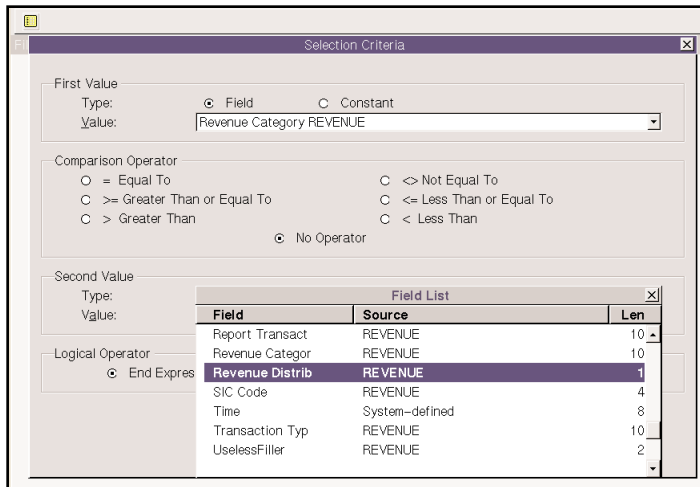

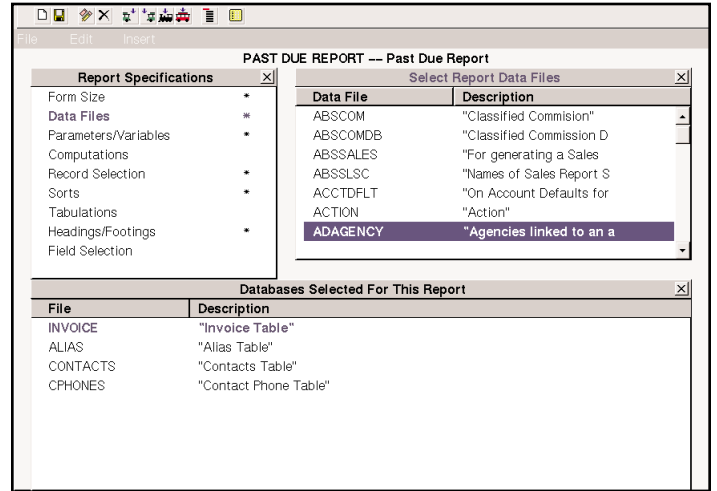

## Customizable Reporting Software

**SpiceRAQ** is a report specification generator designed for power users. SpiceRAQ builds a data dictionary for SCS applications. SpiceRAQ helps you interactively define both simple and complex custom reports which can supplement the standard reports that SCS builds into applications.

Like other SCS applications, SpiceRAQ uses a relational database of report specification components. SpiceRAQ lets you combine information from many different data tables to produce one consolidated report. From each data table, you can select precisely the information you need for the report.

SpiceRAQ allows you to select specific data, do calculations, print headings and footings, and group, sort and summarize data.

You can also easily customize standard reports supplied on SCS systems.

### Servers operating on:

Linux® • Windows 98®/NT®/2000® • SCO® Unix®  
Sun Unix® • Mac OS X®

### Clients operating on:

Windows 98®/NT®/2000® • Linux • Macintosh®  
Unix (SCO® & Sun®)

SCS provides all the systems you need for full pagination. They are available on multiple platforms. You choose the best of current technology.

SCS has over 28 years of experience developing prepress systems for newspapers. Our highly qualified support team will back you up around the clock.

## SpiceRAQ has Superior Functionality and Performance

- **Accesses multiple data tables and input files to produce reports**
- Defines fields, indexes and relations in a data dictionary
- Builds complex record selection queries
- **Provides fast, index-based record selection**
- Sorts on many fields and levels
- **Allows headings and footings for every sort level**
- Specifies multi-line headings, footings and details
- Performs computations on every sort level
- **Uses built-in common statistical functions**
- Contains many formats for displaying dates and numbers
- Creates interactive, parameterized reports
- Exports data to desktop applications
- **Exports selected and aggregated data as SQL statements for loading into data warehouses**
