

PaperCheckAdBoss Test Data

The next step in exploring PaperCheckAdBoss is to supply SCS with test data. This is easier than it sounds! For a small product of roughly 15 to 30 pages (a weekly perhaps), please copy into a `YourNewspaperName.zip` archive, its:

✓ Ad Manifest File

This file lists all of the ads—with their associated attributes like Advertiser Name, Description, Size, etc.—ordered for the product. Almost all Order Entry systems can write **CARDEX** files for Layout-8000, and this is perfect for PaperCheckAdBoss! If your Order Entry system cannot write CARDEX files, please supply whatever Ad Manifest File you can.

✓ Ad Image Files

PDF, EPS, TIFF, or JPEG copies of the product's ads.

✓ Dummied Geometry File

The **OUTEXT** file produced by Layout-8000 for the product. It lists where ads go on pages, and is usually sent to your Pagination department.

✓ Pagination Documents

The final **InDesign** or **QuarkXPress** documents for the product. Omit if your Pagination department does not use InDesign or QuarkXPress.

✓ Page Image Files

PDF, EPS, or JPEG copies of the product's pages. They are often sent to an e-tearsheets system.

If you are unsure where to find any of these files, or don't know how to make a .zip archive, please ask your Information Technology (IT) staff for assistance.

▲ Please upload your archive to:

`ftp://scsupload:global@ftp.newspapersystems.com`

then send an email to `sales@newspapersystems.com` letting us know it's there.
